The Life of Jane Goodall

- 1. On the morning of July 14, 1960, Jane Goodall arrived on the east shore of Lake Tanganyika in Gombe National Park, Tanzania. She had brought a tent, a cup without a handle, a pair of binoculars and her mother. A group of local men met the strange pair of women and helped carry their camping **gear**. Then, around 5 p.m., somebody reported that they had seen a chimpanzee. Straight away, Jane set off into the forest to find her first chimp.
- 2. As a young woman, Jane Goodall had no scientific qualifications but this didn't stop her from following her childhood dream of studying chimpanzees in Africa. She had set out to study the animals and find out how they really lived. After many months of difficult work, she made three surprising discoveries: chimpanzees ate meat, they made and used tools to get food, and they each had unique personalities.
- 3. Every evening, Jane wrote her findings in a diary and she began to publish articles in journals and magazines such as National Geographic. After a while, scientists and academics started reading her studies and Jane was offered a place at a university. After 5 more years of research, she became Doctor Jane Goodall in 1966. Her work was also making her famous. There was a film documentary made about her life called "Miss Goodall and the Wild Chimpanzees" (1963) and then the first of many books called "My Friends the Wild Chimpanzees" was published in (1969).
- 4. During the seventies, Tanzania became a dangerous place to work. It is on the border of four different countries and there was fighting between soldiers and rebels. Many foreigners <u>fled</u> the area but Jane stayed. In the end, she needed a military escort in order to continue her work. In one of her diaries from this period, she notices that chimpanzees can also be violent: 'I thought the chimps were nicer than we are. But time has revealed that they are not. <u>They</u> can be just as awful.'
- 5. A different problem developed in Tanzania in the 1980s. The human population in the region was increasing which caused deforestation and loss of habitat for the chimpanzees. As a result of this, there were only about a hundred chimpanzees living in Gombe National Park by the end of the decade. Jane

realized that something had to be done to help chimpanzees and humans live together so she started helping the local community to grow more trees in the region.

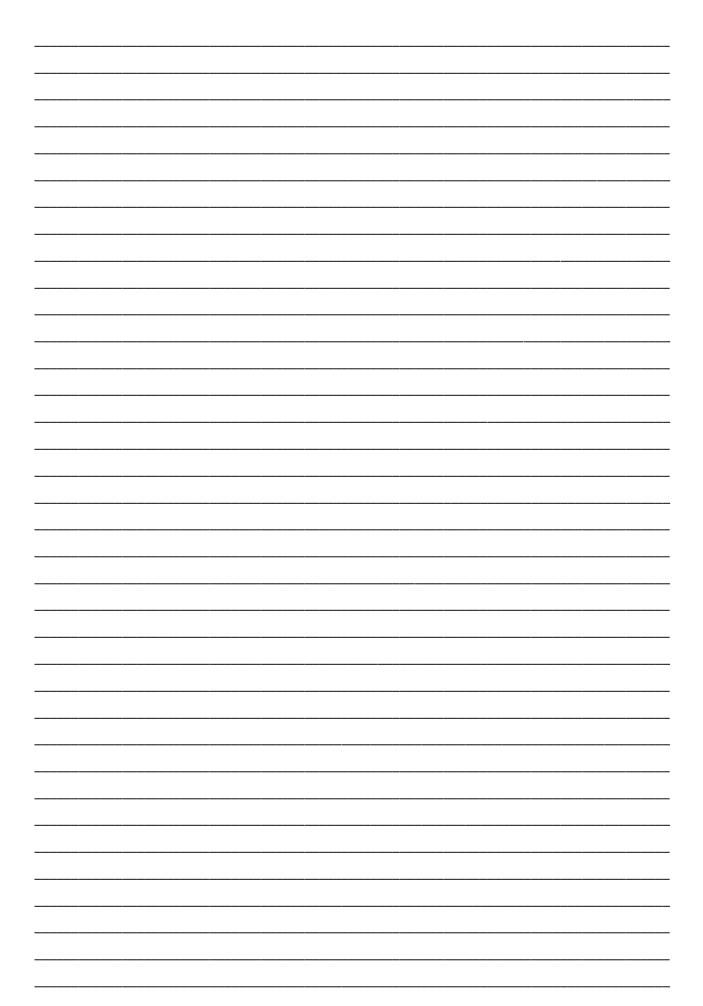

- 6. After 1989, Jane left Tanzania and Gombe National Park in order to do other work. Firstly, she started travelling and giving lectures. She protested against chimpanzees being used in medical research laboratories. She also set up sanctuaries special parks for chimpanzees which had been captured or were orphans because of the trade in chimpanzee meat so that they could stay in a safe place.
- 7. Nowadays, she spends about 300 days a year giving interviews, talks and lectures, meeting with government officials and raising money for the Jane Goodall Institute which continues her research. She has very little spare time left but she still spends part of every year in the forest in Gombe National Park, watching her chimpanzees.
